## COMMENTS

PSID#01 - Fell from net when animal hit roller but was recovered with gaff. Animal was tagged and photographed over the side but was not brought on board. Tip of fluke retained for DNA. No beak; spade-like teeth. Very fresh with a small amount of scavenger damage around the eyes.

PSID#02 - Turtle was very active. Floatline and net meshing was tangled tightly around tip of right flipper. A tag was already present on the right flipper and I put a new one on the left flipper. There were no markings from old tags. Mesh was cut to release the turtle and there were no visible signs of injury. Swam away and dove - one foot of monofilament remained on flipper upon release.

PSID#03 - Shearwater shook free of net on the deck. Identified by black cap and white band at base of tail.
